Dear Hiring Team,

I am writing to express my interest in the Growth Analytics Intern position at Frost & Sullivan. As a fourth-year Artificial Intelligence and Machine Learning undergraduate with a strong interest in business strategy, consulting, and data analytics, I am excited by the opportunity to contribute to a global consulting firm known for helping organizations identify growth opportunities through research-driven insights.

Over the past year, I have deliberately built a portfolio focused on solving business problems using data. I have developed end-to-end analytics projects involving Python, SQL, Power BI, Pandas, and Excel, where I cleaned large datasets, engineered meaningful KPIs, built interactive dashboards, and translated analytical findings into actionable business recommendations. My projects include retail profit optimization, Formula 1 strategy and performance analytics, and customer churn analysis, each designed with a consulting mindset rather than simply presenting visualizations.

Beyond technical skills, I enjoy understanding why businesses perform the way they do. I am particularly interested in market research, benchmarking industries, identifying growth opportunities, and supporting strategic decision-making through structured analysis. These interests closely align with Frost & Sullivan's focus on market intelligence, growth strategy, and transformational consulting.

I am particularly excited about the opportunity to work on a sector-specific capstone project, collaborate with experienced mentors, and learn how consulting teams transform complex market data into strategic recommendations for clients. I am confident that my analytical mindset, curiosity, willingness to learn, and ability to communicate insights clearly would allow me to contribute meaningfully while developing as a future consultant.

I would be grateful for the opportunity to discuss how my background and enthusiasm align with the Growth Analytics Intern role. Thank you for your time and consideration. I look forward to the possibility of contributing to Frost & Sullivan while learning from one of the world's leading growth consulting firms.

Sincerely,

Vyom Mangtani
